For the Security Crate AP68ES

This new skate from our Enviro-Skates range makes moving these large tamper proof Security Crates around a breeze.

The skate is lightweight but at the same time very durable with re-enforced castors. The skates are stackable for ease of storage when not in use making it the perfect partner to the Security Crate's multitude of applications.

security crate...

The Security Crate has a massive capacity of 68 litres and is extremely durable with attached flap lid and internal hanging rails for files. It is easily lockable and tamper proof making it perfect for any security purpose. The Security Crates ability to nest when empty allows it to fit 68 units on a standard pallet to minimize any freight and storage costs. It is also designed to stack when lid is closed for easy volume storage when full.

The Security crate's versatility makes it perfect fit for many industries such as document storage (banks, insurance companies, law firms etc.), warehousing, security, transportation, corporate relocation companies and removalists to name a few.

corporate branding and custom colours...

For minimum orders of 500 crates we are able to offer the Security Crate in custom colours with a perfect match to your colour requirements.

Quality corporate branding with either screen print or hot stamp is also available along with sequentially numbering each crate/skate for easy identification.

All our branding is done in house to make it as cost effective as possible and with minimal lead times.
